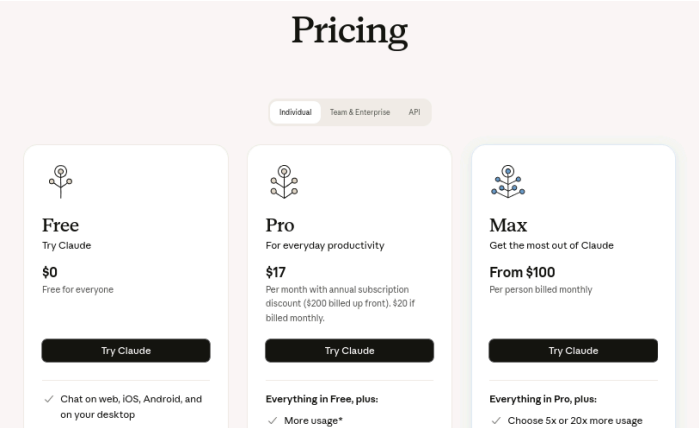
arch linux, emacs

#0 EARLY AI HYPE: 2025

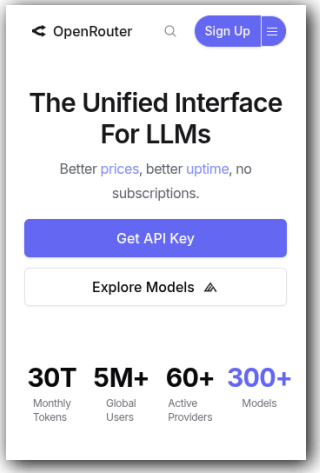


#0 EARLY AI HYPE: 2025

> just try out any model as you like, typically they're super cheap and you'll learn a lot!

inspiring ai talk takeaway at we-are-developers '25

#1 TO THE RESCUE: the ai gateway



#1 TO THE RESCUE: the ai gateway

```
+-------------------+    +-------------------+    +-------------------+
| openai like chat  |    | AI GATEWAY:       |    | actual ai vendor  |-+
| request           |--->| billing & routing |--->| responding        | |-+
+-------------------+    +-------------------+    +-------------------+ | |
                                                    +-------------------+ |
                                                      +-------------------+
```

#1 TO THE RESCUE: claude code cli

CLAUDE CODE

by anthropic | Oct 15, 2025 | 200K context | $1/M input tokens | $5/M output tokens

work. It excels at iterative development, complex codebase navigation, en

by anthropic | Feb 17, 2026 | 1M context | $3/M input tokens | $15/M output tokens

by anthropic | Feb 4, 2026 | 1M context | $5/M input tokens | $25/M output tokens

#1 TO THE RESCUE: claude-code-router

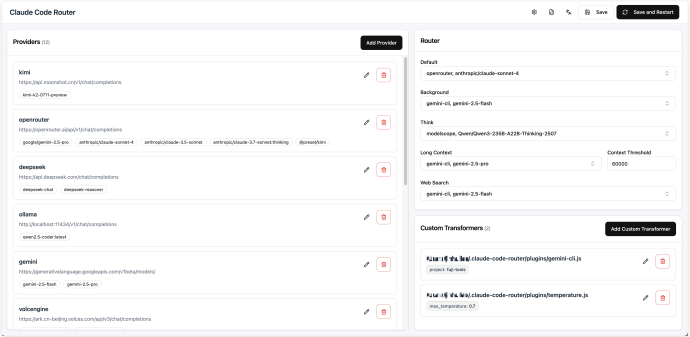
#1 TO THE RESCUE: openrouter.ai

#1 TO THE RESCUE: claude-code-router



#1 TO THE RESCUE: ~~codex cli~~

- does not require a proxy for openrouter :)
- but still sucks when trying to use non openai models :(

#2 PI AGENT

shittycodingagent.ai

#2 PI AGENT: good old security engineering

github.com/hoeck/caged-pie/blob/main/Dockerfile

```
FROM ubuntu:25.04

RUN apt-get update ..............

USER ubuntu

# install pi as a global command but keep it readable by itself
# also mount the npm path from an external path/volume so that its cached and
# writable by pi

ENV PATH="$PATH:/home/ubuntu/npm/bin"
RUN npm config set prefix /home/ubuntu/npm

# mount the current project here
RUN mkdir /home/ubuntu/project
WORKDIR /home/ubuntu/project
```

#2 PI AGENT: switching models \(^_^)/

#2 PI AGENT: costs \(^_^)/

```
~/project (main)
↑8.9k ↓336 $0.004 1.2%/262k (auto)       (openrouter) mistralai/devstral-2512
```

uses data from openrouter.ai/api/v1/models

#2 PI AGENT: shitty evals

```
git checkout -b "eval-base"
emacs CONTEXT.md
git commit -am "eval context"

git checkout -b "eval-devstral"
$> pi --model mistralai/devstral-2512 "read CONTEXT.md"`
....
```

#2 PI AGENT: extensive logs

```
$> ./cost-report.js
...
2026-03-12 09:17   mistralai/devstral-2512              $0.0039
                                                         -------
                   Total                                 $0.0039

Model                                  Total Cost
----------------------------------     ----------
anthropic/claude-opus-4.6              $0.5323
google/gemini-2.5-flash-lite           $0.0005
anthropic/claude-sonnet-4.6            $0.0327
mistralai/devstral-2512                $0.0161
```

#3 ALTERNATIVE GATEWAYS

- look at PI agent sources:
  github.com/badlogic/pi-mono
- check https://models.dev for providers

#4 CONCLUSION

- go to conferences
- go to meetups

I have spent way more time playing around with models and agents

than actually doing useful coding

but it has been *fun*

looking forward to code less now XD
